

ROCK-TRED LEED Certification

Turn to Rock-Tred for expert help in getting your project LEED Certified

Rock-Tred is committed to top quality products and the aggressive pursuit of new coating technologies. We understand our clients' needs and manufacture products that will meet and exceed their requirements and perform from the date of installation well into the future. Our products help designers achieve additional LEED (Leadership in Energy and Environmental Design) points because most of our products contain zero VOCs and zero hazardous air pollutants.

Helping designers meet energy and environmental design requirements is a priority at Rock-Tred.

Rock-Tred understands the impact our work has on our customer's business and offers a complete single source solution for polymer coatings from floor to ceiling. This approach provides our customers with the peace of mind knowing that the coating systems are compatible and will perform perfectly!

The value of Rock-Tred goes far beyond our high quality products to include technical specification assistance, product testing and data collection and a network of highly skilled contractors to install the systems properly.

Start and end your project with the LEED Certification specialists – Rock-Tred!

ROCK-TRED

ROCK-TRED

The following are LEED points where Rock-Tred can help your project become LEED Certified.

Material and Resources

- MR Credit 1 Building Reuse
 - Rock-Tred Coating Systems can be used to rehabilitate an existing building and lessen the need for new facilities.
- MR Credit 2 Construction Waste Management
 - Reduce waste up to 90% when using Rock-Tred's patented Bag Pack Packaging System, which eliminates metal cans and other bulky packaging materials.
- MR Credit 5 Regional Materials
 - Rock-Tred meets the requirements of a regional supplier with manufacturing facilities within 500 miles from most of our customers.
 - All Rock-Tred products are assembled on site and qualify as regionally manufactured materials.

Indoor Environmental Quality

- EQ Credit 4.2 Low Emitting Materials
 - Most Rock-Tred materials contain zero VOC's and zero HAP's.

Your project CAN be LEED certified. Call Rock-Tred!

What is LEED?

LEED: Leadership in Energy & Environmental Design was developed by the United States Green Building Council (USGBC) in 1994. LEED was created to accomplish the following:

- Define the term "green building" by establishing a common standard of measurement
- Promote integrated, whole-building design practices
- Recognize environmental leadership in the building industry
- Stimulate green competition
- Raise consumer awareness of green building benefits
- Transform the building market

Green Building Council members, representing every sector of the building industry, developed and continue to refine LEED. The rating system addresses six major areas:

- Sustainable Sites
- Water Efficiency
- Energy and Atmosphere
- Materials and Resources
- Indoor Environmental Quality
- Innovation & Design Process

LEED certification is obtained after submitting an application documenting compliance with the requirements of the rating system. Certification is granted solely by the Green Building Council responsible for issuing the LEED system used on the project.
