

Rock Quick Patch 'RQP'

information sheet

DESCRIPTION

RQP is a multi-purpose 100% solids epoxy repair paste for fast-track repairs and an excellent adhesive for flooring accessory installations. RQP is a two-component thixotropic compound that is easily applied directly from the Dual Cartridge Kit, or using a putty knife, trowel or plastic applicator out of bulk kits.

USES

RQP's easy workability and rapid cure time make it an ideal product for last minute "touch ups" to missed pop-outs or small cracks in a substrate prior to applying a coating system. RQP is used to repair chips, defects, small voids or "honeycombing" in horizontal, vertical and overhead concrete substrates. RQP's excellent bond strength, thick consistency and quick setting attributes make it an ideal adhesive to use when setting preformed "speed cove", terrazzo strips or termination caps. RQP can be sanded immediately after cure and is strong enough to be drilled, tapped or shaped as needed to conform to the substrate being repaired.

STANDARD VS TUBE GRADE

Standard RQP has a thicker viscosity and can be used on ceilings, walls, floors, etc. Tube Grade RQP has a lower viscosity for ease of application, however, it can only be used horizontally.

ADVANTAGES

- VOC compliant
- Easy 1:1 mix ratio
- Non-shrink
- Good working time, but fast cure time
- High bond strength and tensile strength
- Easy application
